DETAILED ACTION

Comments

Applicants' amendments and request for reconsideration in the communication filed on 12 August 2008 are acknowledged and the amendments are entered. The amendments overcome the prior art rejections of record. The finality of the previous rejection is WITHDRAWN in view of the newly applied rejection set forth below. The claims are deemed to be free of the prior art because the prior art does not teach or suggest the determination of genes of unknown function and assigning a function by homology to genes encoding products of known function in a different organism AND combining a calculation of metabolic demands and uptake rates with a stoichiometric matrix to produce an *in silico* strain of a microbe as claimed. The double patenting rejection is newly applied.

Claims 49-52, 56-60, and 64 are pending and examined in the instant Office action.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims

are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 49-52, 56-60 and 64 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 26-28, 30, 32, 35-36, and 39-41 of copending Application No. 11/980,199. Although the conflicting claims are not identical, they are not patentably distinct from each other because the set of claims of the reference describes the same *in silico* process for from open reading frames, determining the metabolic capability of a strain of a microbe. For

instance, the steps of claim 30 of '199 correspond with the steps of instant independent claim 49. Each claim has the steps of obtaining DNA sequences, determining ORFs, assigning functions to proteins, determining which open reading frames correspond to metabolic genes, determining a stoichiometric balance on relevant metabolic reactions, determining metabolic demand, calculating uptake rates, combining metabolic demands with uptake rates, incorporating general linear programming, performing a flux balance, and providing visual outputs to a user. Additionally claim 41 of the reference has steps that correspond with the steps of instant independent claim 57.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Conclusion

No claim is allowed.
